

# NIRMAL KOSWATTA

## About Me

DevOps-focused engineer with hands-on experience building and maintaining cloud-based infrastructure, automated CI/CD pipelines, and containerized applications.

Proficient with AWS, Docker, Kubernetes, GitHub Actions, and GitOps tools, with experience implementing monitoring and observability using Prometheus, Grafana, and New Relic.

Strong knowledge of Linux, networking, and security, with a focus on automation, scalability, and production-grade system reliability

# Associate DevOps Engineer | Kubernetes | AWS | CI/CD | Cloud Infrastructure

## Education

- Bachelor of Science (Hons) in Computer Science**  
Final Year Undergraduate (2023- Present )  
University of Bedfordshire
- Higher National Diploma (HND) in IT** (2025 - Completed)  
SLIIT City University
- St. Thomas College, Matale** (2021 - Completed)  
Advanced level - bio system technology

## Experiences (2025/12/15 - present)

### DevOps intern

Fortude pvt.ltd

2025/12/15 - 2026/06/15

Role: DevOps Intern / Trainee

- Reviewed **GitHub Actions CI/CD workflows** to identify potential **security risks and vulnerabilities** related to **hosted runners**.
- Conducted security assessments on **CI/CD pipelines**, documented **identified threats**, and prepared **RFC documentation with recommended mitigation strategies**.
- Addressed a **medium-severity container security vulnerability (root user issue)** by implementing **distroless container images** to reduce the attack surface and **improve container security**.
- Optimized CI/CD workflows by implementing **security improvements and validating fixes** through test environment deployments.

zuse technologies pvt.ltd

2026/08/03 - present

- Configured **Prometheus** and **Grafana** dashboards to monitor infrastructure and application performance.
- Provisioned and managed cloud resources on **AWS**, including **EC2, IAM, S3, and CloudWatch**.
- Assisted in deploying and managing workloads on **Huawei Cloud virtual infrastructure**.
- Monitored **Kubernetes clusters**, investigated pod failures, and **optimized resource utilization**.
- Automated routine **Linux administration** tasks using Bash scripting.

## Certifications

- [AWS DevOps Best Practices for Beginners](#)
- [Application Security in DevSecOps](#)
- [Introduction to AWS CloudFormation](#)
- [DevOps Foundations](#)
- [DevOps Foundations: Continuous Delivery/Continuous](#)
- [Google Cloud Foundations: Google Kubernetes Engine \(GKE\)](#)
- [DevOps Foundations: Containers](#)

## Skills

- **DevOps & Infrastructure**  
Docker, Kubernetes, Argo CD, GitHub Actions, Ansible
- **Cloud Platforms**  
AWS, Azure, Netlify, Firebase
- **Monitoring & Observability**  
Prometheus, Grafana, New Relic
- **Automation & Workflows**  
n8n, Bash
- **Version Control**  
Git, GitHub
- **Security**  
Cybersecurity, DevSecOps, Authentication & Authorization
- **Languages**  
Java, PHP, JavaScript, Bash
- **Frameworks**  
Angular, Spring Boot, Laravel, Tailwind CSS, SCSS
- **Libraries**  
React, Redux

## Projects

### 1. CI/CD Monitoring APP

Tech Stack: React, Netlify, Github Actions, Slack API.  
A comprehensive monitoring dashboard built with React for tracking build and deployment status. Features real-time integration with GitHub.

**GitHub:** <https://github.com/Nirmalkoswatta/Monitoring>  
**Live Demo:** [CICD Monitoring Live](#)

### 2. VR-Enhanced Car Modification Parts Finder (Final Year Project)

Tech Stack: React, Node.js, MongoDB, Python (TensorFlow), Three.js / Unity WebXR, Docker, Cloud. model achieved an accuracy of 97.83%  
A smart platform that automatically detects a vehicle and recommends compatible modification parts. Users can preview parts in a VR environment before purchasing, while the system suggests optimized parts based on the user's budget and compatibility. Designed to make car customization more visual, intelligent, and user-friendly.

**GitHub:** <https://github.com/Nirmalkoswatta/finalyearproject>

### 3. LogicHeart Puzzle Game Platform

Tech Stack: React, Redux Toolkit, Node.js, Express, MongoDB, JWT, Mailjet API, Vercel.  
A full-stack puzzle platform featuring OTP authentication, timed difficulty levels, leaderboard rankings, and an admin dashboard for user management and activity tracking.

**GitHub:** <https://github.com/Nirmalkoswatta/logicheart>  
**Live Demo:** <https://logicheart.vercel.app/>

### 4. Record Management System

Tech Stack: React, Node.js, MongoDB, Firebase Hosting.  
A CRUD-based record management system that allows users to create, update, delete, and manage records efficiently. The application provides a simple interface for managing data and is deployed using Firebase

**GitHub:** <https://github.com/Nirmalkoswatta/record-management-system>  
**Live Demo:** <https://record-management-c97e4.web.app/>
