Dear Sir,

This is to apply to the position of the Associate DevOps Engineer at your company.

I am a final-year BSc (Hons) Computer Science student at the University of Bedfordshire (in partnership with SLIIT) and have achieved my Higher National Diploma in IT at SLIIT City University.

I already have a DevOps Intern position at Fortude (Pvt) Ltd, where I am able to work on hands-on experience related to cloud-based infrastructure, CI/CD pipelines, and container-based applications.

I have been using AWS, Docker, and Kubernetes to assist in deployments and enhance system reliability and Grafana and New Relic to monitor and track performance.

Another way I have helped to improve CI/CD workflow is by reporting security vulnerabilities and fixes, such as switching to distroless container images to improve security. These experiences have enabled me to improve my acquisition of automation, DevOps practices, and system reliability.

I love to develop scalable and secure systems, and my projects, such as a CI/CD Monitoring Dashboard and a VR-based vehicle recommendation system (97.83% accuracy), prove my capability to provide a practical solution.

I am also looking forward to beginning my career as an Associate DevOps Engineer and be part of a group that is devoted to cloud-native and constant change.

Thank you for your time and consideration. I look forward to the opportunity to discuss my application.

Yours faithfully,

Nirmal Koswatta
